

Matt Mahoney Joins Plug Smart to Lead Pennsylvania Market Growth

With extensive energy efficiency and C-PACE advocacy experience, Mahoney will be an important addition to Plug Smart's growing presence in the commonwealth.

PITTSBURGH, May 18, 2020 (NewsWire.com) - Plug Smart, an energy services design-build firm headquartered in Columbus, Ohio, welcomes Matt Mahoney as its Western Pennsylvania-based Senior Project Developer.

A native Pittsburgher and graduate of Penn State's Renewable Energy and Sustainability Systems Master's program, Mahoney brings a passion for advanced energy solutions and knowledge of Pennsylvania's energy savings programs, particularly Commercial Property Assessed Clean Energy, or C-PACE.

"I'm excited to be a part of the Plug Smart team and bring my expertise to the local markets," said Mahoney. "I'm looking forward to developing energy savings projects in my backyard while working with a team of professionals that have implemented hundreds of successful energy savings projects across the country."

Mahoney's recent work includes program management in Western Pennsylvania for the [Keystone Energy Efficiency Alliance](#) (KEEA), a Pennsylvania-based trade association for the energy efficiency industry, of which Plug Smart is a member. Mahoney grew KEEA's presence throughout the region and educated local businesses, property owners, governments, and associations about the benefits of energy efficiency programs, including C-PACE.

"Matt's a problem solver that gets things done," said Dave Zehala, Plug Smart's President. "Combine this with his approachability and understanding of Pennsylvania's energy savings programs, especially C-PACE, and you'll see why we're all excited to have him on the Plug Smart team."

Pennsylvania passed [Act 30](#) in 2018, which authorized the establishment of C-PACE programs in the commonwealth. Pennsylvania's C-PACE program ensures commercial, industrial, and agricultural properties can obtain low-cost, long-term financing for energy efficiency, water conservation, and renewable energy projects. Plug Smart is the region's leader for developing and implementing C-PACE projects.
